

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-1162
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A school IT helpdesk staff member	Classify student IT tickets correctly	I have to manually review and assign categories to each incident	The helpdesk receives different types of incidents such as Wi-Fi issues, projector failures, password problems, and slow computers	That manually classifying every ticket takes additional time and effort
PS-2	A school IT helpdesk staff member	Assign the correct category and subcategory to IT tickets	I need to check the ticket description before assigning the classification	Different IT issues require different categories and subcategories	That ticket classification can become repetitive and time-consuming
PS-3	A school IT helpdesk staff member	Process IT tickets efficiently	Tickets need to be reviewed individually before they can be classified and routed	Manual classification increases the effort required to handle incoming incidents	That an automated classification process would make ticket handling easier and more consistent
