Project Title	Auto-Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal aims to automate the classification of IT tickets using **ServiceNow Flow Designer**. The system identifies keywords from the ticket description and automatically assigns the appropriate category and subcategory. This reduces manual classification work, improves ticket handling efficiency, and provides consistent ticket classification.

Project Overview	
Objective	The primary objective is to automatically classify IT incidents using ServiceNow Flow Designer. The system identifies keywords in the ticket description and automatically assigns the appropriate category and subcategory.
Scope	The project focuses on automating the classification of IT tickets in ServiceNow. It covers ticket description analysis, keyword identification, automatic category and subcategory assignment, and email notification.
Problem Statement	
Description	School IT helpdesks receive different types of incidents such as Wi-Fi issues, projector failures, password problems, and slow computers. Manually reviewing and assigning categories to every incident requires additional time and effort.
Impact	Manual ticket classification increases the workload of IT helpdesk staff and may result in inconsistent classification. Automating the process can reduce manual effort, improve ticket-routing efficiency, and provide consistent classification.
Proposed Solution	
Approach	The proposed solution uses ServiceNow Flow Designer to check the ticket description, identify relevant keywords, and automatically assign the appropriate category and subcategory.

Key Features	• Automatic classification of IT incidents. • Keyword-based analysis of ticket descriptions. • Automatic category assignment. • Automatic subcategory assignment. • Email notification after classification. • Reduced manual classification work. • Improved consistency in ticket handling.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computer/Laptop for ServiceNow development and testing	Computer/Laptop
Memory	RAM required for development and testing	8 GB RAM
Storage	Disk space for project files and ServiceNow development	256 GB SSD or higher
Software		
ServiceNow Platform	Platform used to create and manage IT tickets	ServiceNow
Flow Designer	Tool used to create the automatic ticket classification flow	ServiceNow Flow Designer
Development Environment	Environment used for developing and testing the project	ServiceNow Development/Lab Instance
Data		
IT Ticket Data	Information required for ticket classification	Ticket description, category, subcategory
Ticket Keywords	Keywords used to identify the type of IT issue	Wi-Fi, Projector, Forgot Password, Slow Computer
