

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-7089
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Classification depends on predefined keywords	New or different issue descriptions may not be classified correctly	High
2	Limited number of Category and Subcategory options	More IT issue types may require additional classification rules	Medium
3	Email notification is limited to ticket confirmation	Advanced notifications and status updates are not included	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	User Load	Support more users and tickets by optimizing Flow Designer automation
2	Data Storage	Ticket information is stored in the Incident WorkFlow table	Extend the table and maintain structured ticket records for larger data volumes
3	Performance	Classification is performed when a record is created	Optimize flow conditions and classification rules for faster processing
4	Security	Uses ServiceNow table fields and reference fields	Add appropriate role-based access and user permissions

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Add more keywords and IT issue categories	1–2 Months	Improve classification coverage
Phase 2	Add more automated email notifications and ticket status updates	2–3 Months	Improve communication with users
Phase 3	Add reporting and dashboard for ticket classification	3–4 Months	Improve monitoring and analysis
Phase 4	Enhance classification with advanced automation	4–6 Months	Improve automation and reduce manual effort
