

Solution Requirements

Date	29 September 2026
Team ID	SWTID-2026-1162
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>The system shall allow authorized school IT helpdesk staff to access and manage IT incident tickets through the ServiceNow system.</i>	High
2	Authorization levels	<i>The system shall provide appropriate access for helpdesk staff to create, review, and manage IT incident tickets.</i>	High
3	External interfaces	<i>The system shall use ServiceNow Flow Designer to automate ticket classification and email notification.</i>	Medium

4	Transactions processing	<i>The system shall receive IT incident information, process the ticket description, identify the issue, and automatically assign the appropriate Category and Subcategory.</i>	High
5	Reporting	<i>The system shall store classified ticket information so that IT support staff can review the ticket details and classification results.</i>	Medium
6	Business rules, etc.	<i>The system shall automatically classify incidents, assign Category and Subcategory, maintain dependent Category and Subcategory choices, and send an automated email notification.</i>	High
7	Compliance to laws or regulations	<i>The system shall store ticket information within the configured ServiceNow system and follow the access and data-handling controls configured for the application.</i>	Medium
8	Other	<i>The system shall be easy to maintain and extend for additional ticket categories, subcategories, and classification rules.</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	<i>The system should process IT tickets and perform automatic classification without unnecessary delay.</i>	<i>Ticket classification should be completed automatically after ticket submission.</i>
2	Scalability	<i>The system should support the addition of new IT incident categories, subcategories, and classification rules as the helpdesk requirements grow.</i>	<i>New categories and subcategories can be added without redesigning the complete workflow.</i>
3	Security & Data Privacy	<i>Ticket information should be stored securely within the ServiceNow system and access should be limited to authorized users.</i>	<i>Only authorized users can access and manage ticket information.</i>
4	Reliability & Availability	<i>The system should consistently perform automatic ticket classification and email notification when the configured conditions are satisfied.</i>	<i>Classification and notification should execute successfully for valid tickets.</i>
5	Usability & Accessibility	<i>The system should be simple for school IT helpdesk staff to use for creating, reviewing, and managing IT incident tickets.</i>	<i>Users should be able to create and process tickets with minimal manual classification effort.</i>
6	Other	<i>The system should be easy to maintain and extend when new ticket types or classification requirements are introduced.</i>	<i>Classification rules and ticket choices can be updated without major changes to the system.</i>
